

VerifyIT

Scan the label. Know the truth.

An label scanner that checks every claim printed on a product against India's official records and gives a Trust Score in seconds.

Team:

Yadnyesh Muratkar

Sunil Jakhar

Aditya Raunak

Nearly 3 in 10 products may be fake.

And the printed label is the only evidence a shopper has.

● **89%**

of consumers have bought a fake at least once

● **74%**

say fakes are rising in their area

● **\$467 bn**

global trade in counterfeit goods
(2.3% of world imports)

The risk is in our food and medicine.

Food samples tested by FSSAI vs. samples that failed

1 in 4 failed food-safety standards in 2022-23

Perceived share of fakes, by sector

Pharma rose from 20% to 28% since 2022

Why shoppers can't tell.

● FAKES LOOK REAL

61%

judge a product by its look and feel.
Fakes copy the brand, logo and
even the maker's address.

● PROOF IS SCATTERED

4

separate portals (MCA, FSSAI,
BIS, Legal Metrology) to check one
pack, each behind a captcha.

● FOUND OUT TOO LATE

25%

bought a fake without knowing.
Almost nobody reports it, so fake
batches keep circulating.

Built for the shop aisle.

PRIMARY

Shoppers & families

Need a clear yes or no in Hindi, in 5 seconds, before they pay.

SECONDARY

Kirana & small retailers

Need to check a new supplier's stock before it goes on the shelf.

PARTNER

Food-safety officers & consumer forums

Need early warning of where suspicious products are appearing.

Go-to-market: packaged food & FMCG first → medicines → electronics & cosmetics

One photo. One Trust Score.

Confidence for shoppers, due diligence for retailers, early warnings for regulators.

Scan

Photograph any product label. OpenCV Reads 12+ fields: maker, address, licence numbers, MRP, dates.

Verify

Cross-checks company records, FSSAI and BIS licence rules, label law and lookalike brands.

Decide

A 0-100 Trust Score, each red flag explained in Hindi or English, with a one-tap official check.

Three checks, one scan.

01

Company check

Is the maker real and active? Matched against MCA company records, including struck-off firms.

02

Licence check

Does the FSSAI or BIS number have a valid structure, and does its state match the address?

03

Label-law check

Are the declarations required by the Legal Metrology rules all there: MRP, net quantity, dates, helpline?

How it works.

One photo goes through five stages in under 5 seconds, using open data stored locally, with no live government API needed.

Cline at the core.

BUILD

Plan mode designs the schema and APIs. Act mode writes the website, the API and the data import.

DEBUG

Runs our real-vs-fake label tests, reads the failures and fixes them. Checkpoints make rollback safe.

POWER

RuleSmith: headless Cline turns new regulation PDFs into tested rule code for the website.

RuleSmith: how VerifyIT keeps up with the law

The label checker updates itself when the rules change, with a human approving every change.

Stage 2: prototype features

Build plan

1. Web Application: Develop a user-friendly interface for uploading product images.
2. Text Extraction (OCR): Extract relevant text from images and flag uncertain fields for verification.
3. Company Search: Conduct all confirmation checks.
4. Results & Confidence: Display verification results, confidence levels, and flagged discrepancies.

Ships working: camera scan · OpenCV label reading · all four checks · Trust Report in Hindi & English · one-tap official verify

Open data only · No hardware · No live government API

Confirmation checks:

- **Company check:** Is the maker real and active? Matched against MCA company records, including struck-off firms.
- **Licence check:** Does the FSSAI or BIS number have a valid structure, and does its state match the address?
- **Label-law check:** Are the declarations required by the Legal Metrology rules all there: MRP, net quantity, dates, helpline?
